This is a big demo for Ada PDF Writer (PDF_Out package).
We begin with some Put_Line and other Ada.Text_IO-like commands.
You can use a PDF stream just like a File_Type of Ada.Text_IO
and its standard subprograms.

Of course you have much more with PDF_Out: high-quality fonts,
colors, amazing vector graphics, image inclusions, ...

Testing Latin-1 characters: je répète, ganz schöne Umläute
Testing special characters: ()\
